10. **Correct Answer: C) Rolling and sliding**

The wheels roll while the car body moves forward (slides along).

So, both motions happen together.

SINGLE CORRECT ANSWER TYPE

1. **Correct Answer: (B)**

(a) Chair → A chair has flat surfaces and does not roll → Slide only (p)

(b) Ball → A ball is round and moves by rolling → Roll only (q)

(c) Coin → A coin can both roll (on edge) and slide (on face) → Both roll and slide (r)

So, the correct matching is:(a)→(p), (b)→(q), (c)→(r)

2. **Correct Answer: B**

Option A: A book has flat surfaces, so it only slides, it does not roll

Option B: A brick has length, breadth, and height, so it is a 3-D shape

Option C: A rectangle has four sides, not three

Option D: The shaded face shown is not a triangle (it appears circular/oval)

3. **Correct Answer: B (Q)**

A ring is circular in shape.

Group Q contains circles.

Therefore, a ring belongs to Group Q.

4. **Correct Answer: D (a = 14, b = 2)**

(a) Counting circles

Wheels in first vehicle = 2 circles

Wheels in second vehicle = 4 circles

Window (round) in second vehicle = 1 circle

Total circles = 2 + 4 + 1 = 7 circles

But each wheel has 2 circular outlines (outer + inner):

First vehicle wheels → 2 × 2 = 4

Second vehicle wheels → 4 × 2 = 8

Window → 1

Total = 4 + 8 + 1 = 13 circles, plus 1 small top circle detail = 14

So, (a) = 14

(b) Squares and triangles

Squares = 2 (first vehicle window) =2 squares

Triangles = 2 (front and back of first vehicle) + 1 (second vehicle end) + 1 (top roof triangle) = 4 triangles

Difference = 4 – 2= 2

So, (b) = 2

5. **Correct Answer: A (3)**

Count the shapes in the figure:

Triangles: 9, Squares: 6

Difference = 9 – 6 = 3

6. **Correct Answer: B (2)**

Count triangles:

Left front triangle = 1

Top triangle = 1

Right front triangle = 1

Total triangles = 3

Count circles:

First wheel has 2 circles (outer + inner)

Second wheel has 2 circles (outer + inner)

Window circle = 1

Total circles = 5

Difference: Circles – Triangles = 5 – 3 = 2

7. **Correct Answer: A (2)**

Count all the squares in the figure:

Two square windows in the red part = 2 squares

8. **Correct Answer: C (Circle)**

Square → made of straight lines

Rectangle → made of straight lines

Circle → made of a curved line

Triangle → made of straight lines

9. **Correct Answer: C**

Option A: A phone has flat surfaces → it slides but does not roll → Correct

Option B: A Triangle traces a pizza slice→ correct

Option C: A ball is round (sphere), not a cube → Incorrect

Option D: Not correct because there are incorrect statements.

The most clearly incorrect statement is "A ball looks like a cube."

10. **Correct Answer: C**

(p) Door → rectangular shape → Rectangle (2)

(q) Rubik's cube → faces are square → Square (3)

(r) Bucket → top view is circular → Circle (1)

So, matching is:(p)→(2), (q)→(3), (r)→(1)

11. **Correct Answer: A (Cylinder)**

A cold drink can has:

Two circular faces (top and bottom)

One curved surface

This shape is called a cylinder.

12. **Correct Answer: C (4)**

Count all the rectangles in the figure:

1 rectangle in the green back part

1 small yellow rectangle inside it

1 vertical yellow rectangle in the middle

1 horizontal yellow rectangle in the middle

Total rectangles = 4

13. **Correct Answer: A (7)**

Count each straight line segment in the figure:

Total straight lines = 7

14. **Correct Answer: A**

Shape (X) is a part of a circle with a curved outer edge and a specific cut.

After comparing all options, Option A has the exact complementary shape that fits with shape (X) to form a full circle.

15. **Correct Answer: B (2)**

Items shown:

Dice → cube shape

Water bottle → cylinder

Gift box → cube shape

Ice cream cone → cone

Ball → sphere

Number of cube-shaped items = 2

16. **Correct Answer: C (4)**

Count all the triangles in the figure:

1 large triangle on the left side

1 large triangle on the right side

2 small triangles inside the red shape

Total triangles = 1 + 1 + 2 = 4

17. **Correct Answer: C (Cube)**

The object shown looks like a box with all sides equal.

All faces are squares, and all edges are equal.

This shape is a cube (not a cuboid, sphere, or cylinder).

18. **Correct Answer: B (3)**

Circles:

Head (big circle) = 1 ,Eyes = 2 ,Nose = 1

Circles on hat (head) = 3

Total circles = 1 + 2 + 1 + 3 = 7

Triangles: Hat = 1 , Left side = 1,

Right side = 1, Bottom = 1

Total triangles = 4

Difference: 7 − 4 = 3

19. **Correct Answer: C (Rectangle)**

The picture frame shown has four sides.

Opposite sides are equal, and it is longer in one direction.

This matches the shape of a rectangle.

20. **Correct Answer: C (14)**

Count all triangles carefully:

1. In the face (red square): 2 triangles (eyes)

2. On the body (yellow + green parts):

Yellow part = 2 triangles,

First green box = 2 triangles ,

Second green box = 2 triangles

Total so far = 2 + 2 + 2 + 2 = 8

3. Bottom hanging triangles (under wheels):

There are 6 small triangles

Total triangles:8 + 6 = 14
